# task 2

- Create CPU utilization alarm
- Trigger SNS notification
- Monitor ALB metrics
- Enable detailed monitoring for EC2

## step 1: create cpu utilization alarm

1. open CloudWatch
2. click Alarms then create alarm
3. click select metric and choose: EC2 → per-instance metrics
4. then select CPUutilization
5. choose your Instance ID and click s**elect metric**

## Configure Condition:

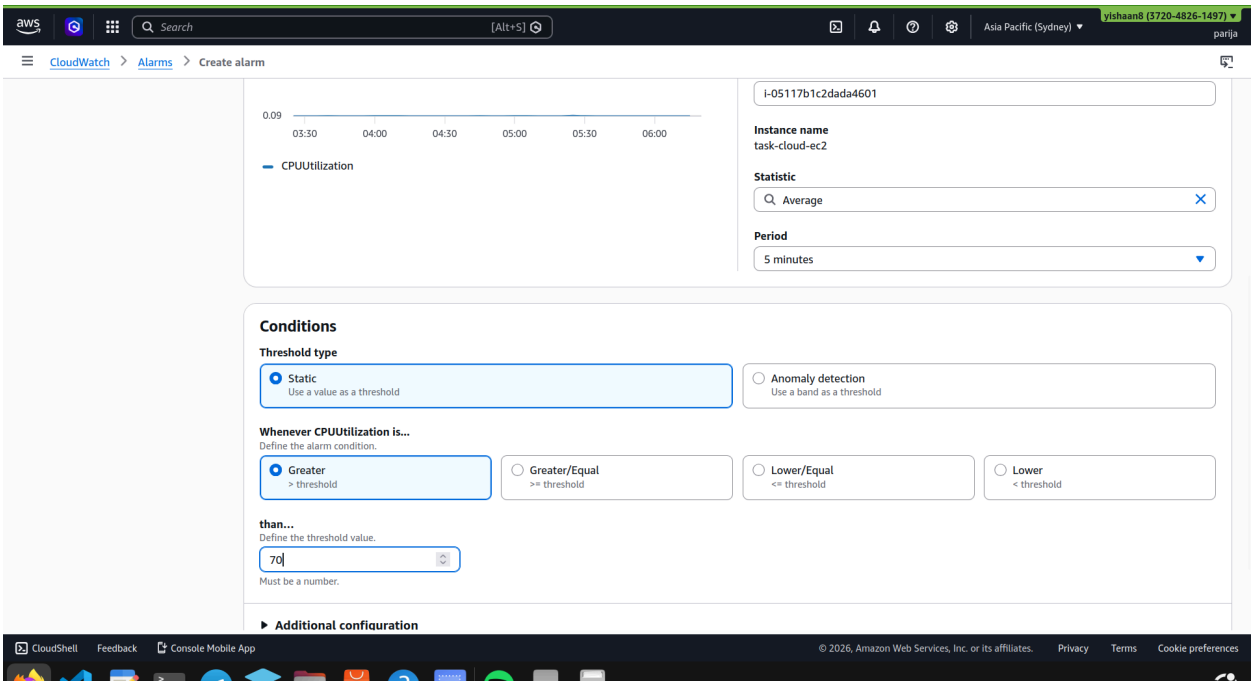
Threshold type: **Static**

Whenever CPUUtilization is greater than 70% for 5 minutes

click next

## step 2: Trigger SNS Notification

1. In the alarm actions section → select In alarm
2. then choose: create new SNS topic
3. enter email address
4. click create topic
5. Click next then create alarm



CloudWatch > Alarms > Create alarm

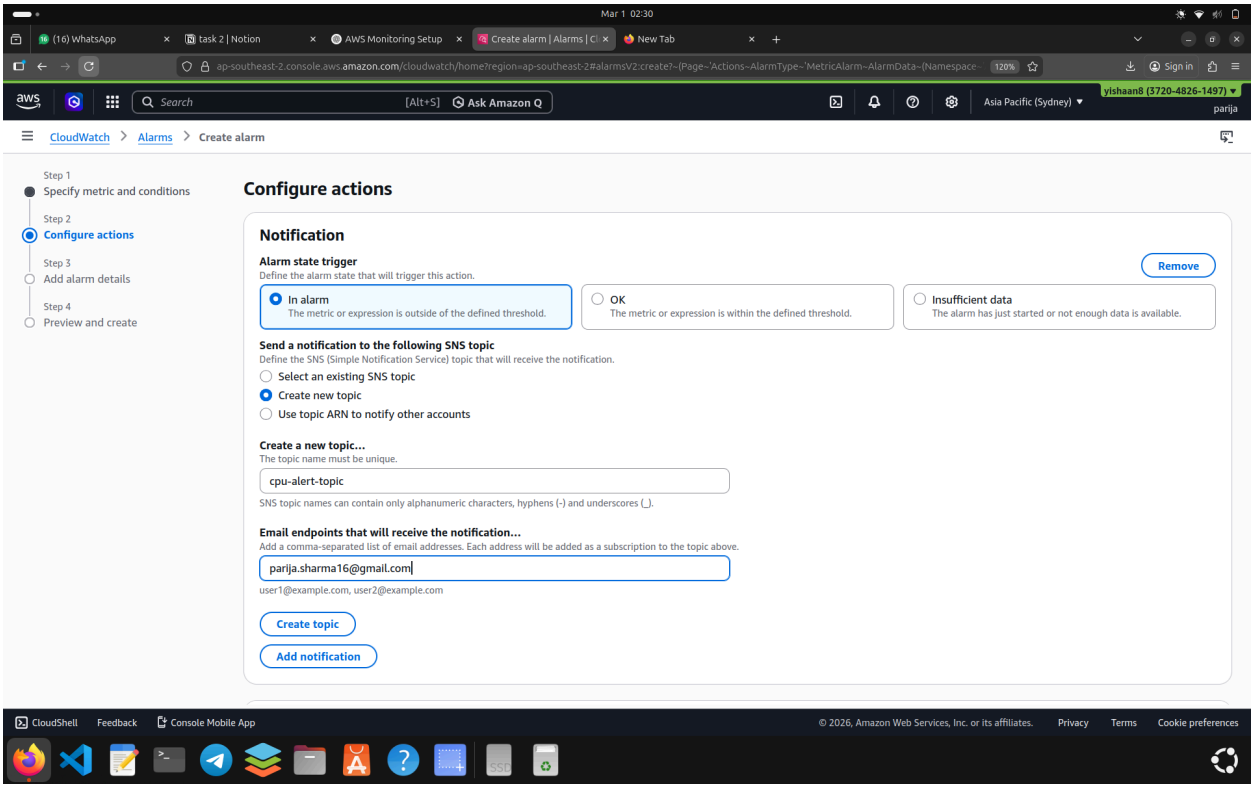
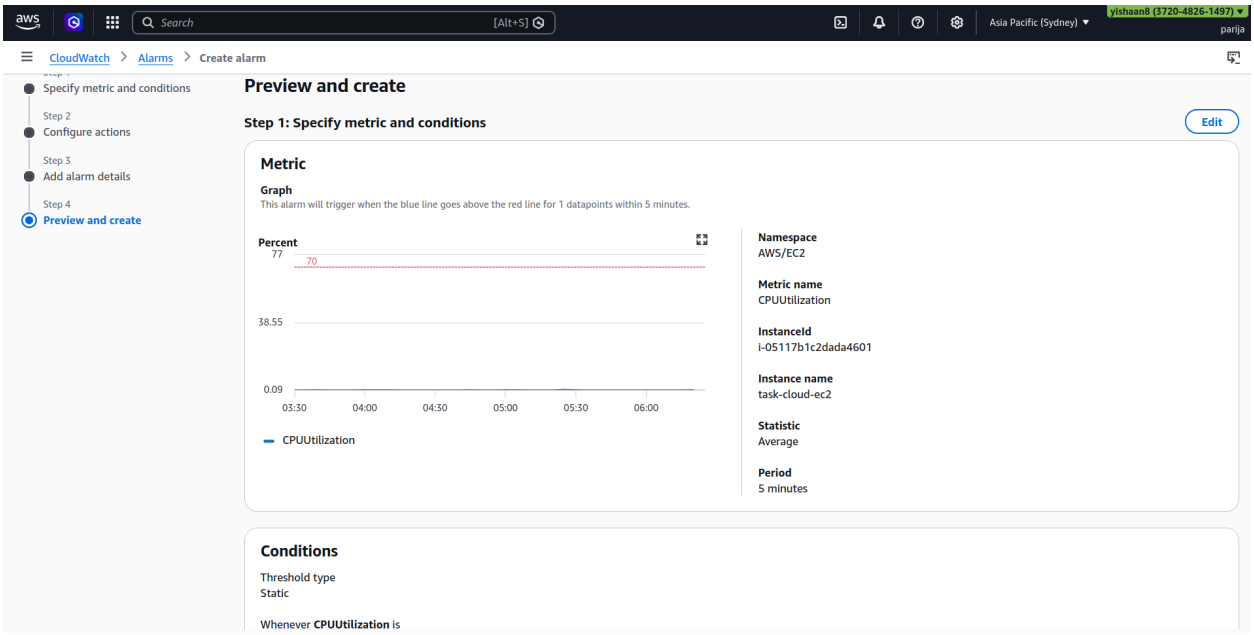
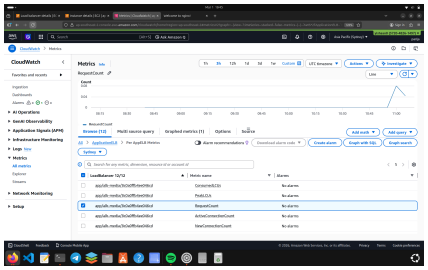
Use a value as a threshold
Anomaly detection
Use a band as a threshold
Whenever CPUUtilization is...
Define the alarm condition.
Greater
> threshold
Greater/Equal
>= threshold
Lower/Equal
<= threshold
Lower
< threshold
than...
Define the threshold value.
70
Must be a number.
Additional configuration



CloudWatch > Alarms > Create alarm
Step 1
Specify metric and conditions
Step 2
Configure actions
Step 3
Add alarm details
Step 4
Preview and create
Configure actions
Notification
Alarm state trigger
Define the alarm state that will trigger this action.
Remove
In alarm
The metric or expression is outside of the defined threshold.
OK
The metric or expression is within the defined threshold.
Insufficient data
The alarm has just started or not enough data is available.
Send a notification to the following SNS topic
Define the SNS (Simple Notification Service) topic that will receive the notification.
Select an existing SNS topic
Create new topic
Use topic ARN to notify other accounts
Create a new topic...
The topic name must be unique.
cpu-alert-topic
SNS topic names can contain only alphanumeric characters, hyphens (-) and underscores (_).
Email endpoints that will receive the notification...
Add a comma-separated list of email addresses. Each address will be added as a subscription to the topic above.
parija.sharma16@gmail.com
user1@example.com, user2@example.com
Create topic
Add notification



# step 3:Monitor ALB Metrics

1. Go to CloudWatch
2. Click metrics
3. Select: ApplicationELB
4. choose load balancer


RequestCount visible
