task 5

Create a new VPC
create an instance inside that VPC

Map your Domain with your Nginx webserver

1. Go to AWS Console → VPC → Create a new VPC with CIDR block (10.0.0.0/16).
2. Create a subnet inside the VPC (e.g., 10.0.1.0/24).
3. Create an Internet Gateway and attach it to the VPC.
4. Create a Route Table and add route:
    - 0.0.0.0/0 → Internet Gateway
5. Associate the Route Table with the subnet.
6. Launch an EC2 instance:
    - Select VPC and subnet
    - Enable auto-assign public IP
    - Allow ports 22 (SSH) and 80 (HTTP)
7. Connect to EC2 using SSH.
8. Install Nginx:
    - sudo apt update
    - sudo apt install nginx -y
9. Start Nginx:
    - sudo systemctl start nginx
    - sudo systemctl enable nginx
10. Configure domain DNS:

- Add A record → domain → EC2 public IP
- Remove old/duplicate records

1. Configure Nginx:

- Edit /etc/nginx/sites-available/default
- Add domain in server_name

1. Test and restart Nginx:

- sudo nginx -t
- sudo systemctl restart nginx

1. Open domain in browser to verify website.
